It is a colorless, heavy, irrespirable gas, extinguishing flame, and when breathed destroying life. It can be reduced to a liquid and solid form by intense cold and pressure. It is produced in the fermentation of liquors, and by the combustion and decomposition of organic substances, or other substances containing carbon It is formed in the explosion of fire damp in mines, and is hence called *after damp*; it is also known as *choke damp* and *mephitic air*. Water will absorb its own volume of it, and more than this under pressure, and in this state becomes the common soda water of the shops, and the carbonated water of natural springs Combined with lime it constitutes limestone, or common marble and chalk. Plants imbibe it for their nutrition and growth, the carbon being retained and the oxygen given out. — **Carbonic oxide**

Centrifugal force (*Mech.*), a force whose direction is from a center

☞ When a body moves in a circle with uniform velocity, a force must act on the body to keep it in the circle without change of velocity The direction of this force is towards the center of the circle. If this force is applied by means of a string attached to the body, the string will be in a state of tension To a person holding the other end of the string, this tension will appear to be directed toward the body as if the body had a tendency to move away from the center of the circle which it is describing Hence this latter force is often called *centrifugal force* The force which really acts on the body being directed toward the center of the circle is called *centripetal force*, and in some popular treatises the centripetal and centrifugal forces are described as opposing and balancing each other. But they are merely the different aspects of the same stress. *Clerk Maxwell.*

Chance (chăns), *n.* [*F. chance,* OF. *cheance,* fr. LL. *cadentia* a falling (in allusion to the falling of the dice), fr. L. *cadere* to fall; akin to Skr. *çad* to fall, L. *cedere* to yield, E. *cede.* Cf. CADENCE] **1.** A supposed material or psychical agent or mode of activity other than a force, law, or purpose; fortune; fate; — in this sense often personified.

It is strictly and philosophically true in nature and reason that there is no such thing as *chance* or accident; it being evident that these words do not signify anything really existing, anything that is truly an agent or the cause of any event, but they signify merely men's ignorance of the real and immediate cause. *Samuel Clark.*

Any society into which *chance* might throw him *Macaulay*

That power
Which erring men call *Chance.* *Milton*

2. The operation or activity of such agent.

By *chance* a priest came down that way. *Luke* x. 31

3 The supposed effect of such an agent; something that befalls, as the result of unknown or unconsidered forces, the issue of uncertain conditions; an event not calculated upon, an unexpected occurrence; a happening, accident, fortuity, casualty.

It was a *chance* that happened to us. 1 *Sam.* vi 9.

And wins (O shameful *chance*!) the Queen of Hearts. *Pope*

4 A possibility; a likelihood; an opportunity; — with reference to a doubtful result; as, a *chance* to escape; a *chance* for life, the *chances* are all against him.

So weary with disasters, tugged with fortune,
That I would get my life on any *chance,*
To mend it, or be rid on 't. *Shak*

5 (*Math*) Probability.

☞ The mathematical expression of a *chance* is the ratio of frequency with which an event happens in the long run. If an event may happen in a ways and may fail in b ways, and each of these $a + b$ ways is equally likely, the *chance*, or probability, that the event will happen is measured by the fraction $\frac{a}{a+b}$, and the *chance*, or probability, that it will fail is measured by $\frac{b}{a+b}$.

See CHANCEL.] A judicial officer of high rank; the president, or chief justice, of a court of chancery, which in England and in the United States is distinctively a court with equity jurisdiction.

☞ The *chancellor* was originally a chief scribe or secretary under the Roman emperors, but afterward was invested with judicial powers, and had superintendence over the other officers of the empire. From the Roman empire this office passed to the church, and hence every

bishop has his chancellor, the principal judge of his consistory. In later times, in most countries of Europe, the chancellor was a high officer of state, keeper of the great seal of the kingdom, and having the supervision of all charters, and like public instruments of the crown, which were authenticated in the most solemn manner. In France, a secretary is in some cases called a *chancellor*. In Scotland, the appellation is given to the foreman of a jury, or assize. In the present German empire, the *chancellor* is the president of the federal council and the head of the imperial administration. In the United States, the title is given to certain judges of courts of chancery or equity, established by the statutes of separate States. *Blackstone. Wharton.*

2 In the United States, a court of equity; equity; proceedings in equity.

☞ A court of chancery, so far as it is a court of equity, in the English and American sense, may be generally, if not precisely, described as one having jurisdiction in cases of rights, recognized and protected by the municipal jurisprudence, where a plain, adequate, and complete remedy can not be had in the courts of common law. In some of the American States, jurisdiction at law and in equity centers in the same tribunal. The courts of the United States also have jurisdiction both at law and in equity, and in all such cases they exercise their jurisdiction, as courts of law or as courts of equity, as the subject of adjudication may require In others of the American States, the courts that administer equity are distinct tribunals, having their appropriate judicial officers, and it is to the latter that the appellation *courts of chancery* is usually applied, but, in American law, the terms *equity* and *court of equity* are more frequently employed than the corresponding terms *chancery* and *court of chancery.* *Burrill*

Syn. — To cheer; solace; console, revive; encourage; enliven, invigorate; inspirit; gladden, recreate; exhilarate; refresh; animate; confirm; strengthen. — To COMFORT, CONSOLE, SOLACE. These verbs all suppose some antecedent state of suffering or sorrow. *Console* is confined to the act of giving sympathetic relief to the mind under affliction or sorrow, and points to some definite source of that relief; as, the presence of his friend *consoled* him, he was much *consoled* by this intelligence The act of consoling commonly implies the inculcation of reasignation. *Comfort* points to relief afforded by the communication of positive pleasure, hope, and strength, as well as by the diminution of pain; as, "They brought the young man alive, and were not a little *comforted*" *Acts* xx. 12. *Solace* is from L. *solacium*, which means, according to Dumesnil, consolation inwardly felt or applied to the case of the sufferer. Hence, the verb *to solace* denotes the using of things for the purpose of affording relief under sorrow or suffering; as, *to solace* one's self with reflections, with books, or with active employments.

4. A wadded bedquilt, a comfortable. [*U. S.*]

5 (*Law*) Unlawful support, countenance, or encouragement, as, to give aid and *comfort* to the enemy.

Syn. — COMFORT, CONSOLATION. *Comfort* has two meanings: 1. Strength and relief received under affliction, 2 Positive enjoyment, of a quiet, permanent nature, together with the sources thereof; as, the *comfort* of love, surrounded with *comforts*, but it is with the former only that the word *consolation* is brought into comparison. As thus compared, *consolation* points to some specific source of relief for the afflicted mind, as, the *consolations* of religion. *Comfort* supposes the relief to be afforded by imparting positive enjoyment, as well as a diminution of pain. "*Consolation*, or *comfort*, signifies some alleviation to that pain to which it is not in our power to afford the proper and adequate remedy, they imply rather an augmentation of the power of bearing, than a diminution of the burden." *Johnson.*
